**Maryln Abbott : Resilient Garden: Planning and Planting for Unpredictable Weather** before purchasing it in order to gage whether or not it would be worth my time, and all praised Resilient Garden: Planning and Planting for Unpredictable Weather:

Weather patterns are changing - earlier springs, record summer temperatures and erratic rainfall. And even when it is raining, we still have to be aware of conserving water. From her gardens in the dry heat of Australia and the wet of Hampshire, Marylyn Abbott has learnt about plant behavior in these conditions and divulges her knowledge in this aptly timed book. She focuses on the dry gardens that work and why, how to create illusions of water, how to care for dry climate plants, and create the right conditions (including mulches to conserve water, plant groupings, preparation of plants) and drainage for the times when it suddenly pours and pours. Together with a list of beautiful plants that will 'weather well', this is both a practical and inspirational read.

'This book is beautifully illustrated and contains a lot of advice on planning and structure.' Image Interiors About the Author Marylyn Abbott is acknowledged as one of the world's greatest garden creators - BBC2's Gardeners' World

made an exclusive programme about her work (2001) and she lectures throughout the world. Marylyn has created Australia's most visited garden at Kennerton Green, and for the last decade has been re-creating the gardens of West Green in Hampshire, now open to the public and awarded a two-star rating by The Garden Guide.
