On top of the world: Reinventing the rooftop As urban living intensifies in density and numbers, the city landscape expands both outwards and upwards. Architects and urban designers craft new and experimental structures while also investigating existing buildings for potential reinvention or expansion. In particular, the roof of a building, once a

perfunctory structural element, is now a city space in and of itself, beloved for the capacity to eke out further room for living or to craft inspiring refuges away from the bustle of the metropolis. This international selection of urban rooftops catalogs a new urban dimension. Through over 50 bars, restaurants, temporary art installations, and gardens, it testifies to the variety of intelligent and exuberant designs that grace city summits from Sydney to Hong Kong, Oslo to Chicago. Whether its the panoramic views, the exposure to the elements, or a slight giddiness that comes with height, we see just how the roof has nurtured not only architectural invention but a whole new facet and thrill to city living. Just like its predecessors *Tree Houses* and *Cabins*, *Urban Rooftops* features both brilliant photography and bright, contemporary illustration. As with all books in TASCHEN's architecture series, it also celebrates both the established and the rising talents of the industry. Featured artists in this movement towards the skies include Pritzker Prize winners Norman Foster and Shigeru Ban, Jeffrey Inaba, Julien de Smedt (JDS), and landscape designers such as Ken Smith and Vladimir Djurovic. Text in English, French, and German

The book features forests reaching for the skies, blooming gardens, pools flowing to a buildings edge, art installations and outdoor spaces that switch easily from serving lunch to pouring drinks as nighttime hot spots.
