It is a very short book which took me about an hour to read. It is filled with generalities without discussions. For example: on paragraph reads, " handcrafted log homes tend to fit into three categories of cutting methods: full scribed; hand hewn dove tail and full round chinked styles. " but the author goes into no detail about these differences. Yes there are a few nice pictures however only about a quarter of them actually have captions. The last quarter of the book are "floor plans" for various small homes. 0 of 0 people found the following review helpful. beautiful bookBy usafpilotmama This book is very inspirational and makes me long for the cold winter nights snuggled up in our "fantasy log cabin" in the woods...wonderful ideas for those (like us) looking to build a custom home. 0 of 0 people found the following review helpful. Not as expected, no actual plansBy JenKI expected more than broad design ideas and had hoped for some actual plans. It immediately went to Goodwill as I missed the return date.
