This is a really great addition to my gardening library. Growing food in the desert is different than gardening in other parts of the country, and Jacqueline Soule's new guide is easy and pleasurable to read. I especially appreciate the variety recommendations separated by elevation - this will be a great help when visiting local nurseries.

I bought this book about 2 weeks ago and could not put it down. It is well written and gives specifics for all areas of the southwest. For me, that's low desert. I immediately went out and fertilized my peach trees and have plans to put in another type that ripens later than the 2 I have now ripen. I also plan to add several other fruit trees. As for the vegetables, I think I finally have it though my thick head that I can't plant everything in the very early spring and expect it to flourish once it gets to 100+ a couple of months later. Planting in fall when it's 100+ seems so wrong, but it is what's necessary. Ms. Soule made me see the light and I can't wait to get more garden areas going. Thank you so much for a great well written book full of information!

So far has been quite interesting and informative. Only 4 stars because haven't been able to implement the information on our 5-acre property out in the high desert yet.
