Disappointed in the freezing section. Not nearly enough specifics. We have a long growing season so freezing is a great option for preservation but the details I needed were not there.

For someone like myself who has NEVER canned, dried, or done anything to preserve food before, this seemed a little too general. I would have preferred more detailed instructions. For example, which foods dry well and which don't? How long do certain foods take to dehydrate? How long to process foods in a non-pressure canner? Exact instructions for smoking and drying fish???

Overall, tells you about the different techniques but lacks enough detail (other than the specific canning recipes) for those of us that want to be held by the hand and guided.

Experts in food preservation and storage have been interviewed and their commentary has been included here to help you understand what all you will be able to expect from your preserved foods.
