Raef Meeuwisse : The Encrypted Pocketbook of Passwords before purchasing it in order to gage whether or not it would be worth my time, and all praised The Encrypted Pocketbook of Passwords:

2 of 2 people found the following review helpful. Totally secure from malware and also from any shoulder surfers!By W F FoxThis is the only really secure password book I found out there. I know most people write down their passwords as it is the only way to keep the hundreds we need different but accessible. However, I also know that writing down the password in full is a bad idea. I wasn't keen on an online solution, as it just feels like something else that can get stolen. This strikes the right balance, it lets me write most of my username and password information down but keeps enough information secret and out of the book so even if a copy gets stolen, the thief would not be able to get straight in to my accounts.1 of 2 people found the following review helpful. This book is great as you can now safely write down your passwords ...By CustomerFinally I don't need to try to remember all the different passwords I have! I have tried different ways to remember my passwords but nothing works. This book is great as you can now safely write down your passwords in a format that cannot be used by anyone other than you. As it is pocket sized it is also easy to keep to hand whenever you need it. Highly recommended!2 of 3 people found the following review helpful. Useful - recommended.By L RogersUseful little book packed with tips on how to stay safe online - and how to remember all those passwords!

A password journal with a major difference! An alphabetized storage solution for over 200 separate accounts, username and password details, using one or more secret keys to help keep the password information secure, even if the book itself is accessed or stolen.

About the AuthorRaef Meeuwisse is the author of Cybersecurity for Beginners, The Cybersecurity to English Dictionary, Cybersecurity: Home and Small Business and other titles. He delivered the combined security and privacy control framework for two, multi-billion dollar healthcare companies and also designed AdaptiveGRC, the world's first single data source / zero replication governance, risk management and compliance suite. He frequently performs gap analysis on different company security frameworks and really enjoys writing and speaking on cyber topics.
